DETAILED ACTION

The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-15 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for mouthwash solutions containing potassium nitrite and sulfur does not reasonably provide enablement for mouthwash solutions containing potassium nitrite, sulfur and activated carbon. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention commensurate in scope with these claims.

The nature of the invention:

The inventions is directed to mouthwashes and methods of preparing the same containing potassium nitrate, sulfate and activated carbon added to a water permeable sac, immersed in water, heated and cooled, wherein the product is the solution outside of the sac.

The state of the prior art and the predictability or lack thereof in the art:

The prior art of record does not appear to disclose the use of a water permeable sac containing the mixture above and used to prepare the mouthwash.

The amount of direction or guidance present and the presence or absence of working examples:

The Specification provides methods of preparing the mouthwashes, however, there is no indication as to the components of the final product.

The breadth of the claims and the quantity of experimentation needed:

Art Unit: 1616

The claims are broad in that they do not indicate what is contained in the final solution, however, they do include in their scope the presence of activated charcoal in the final product. However, there is no indication that activated charcoal is water soluble (See Merck Index, Carbon Amorphous (2006)). As such, since there is no teaching as to how the final product will contain active charcoal, it appears that one of ordinary skill in the art would be required to do undue experimentation in order to prepare a mouthwash having the same while using a sac that is water permeable and removed once the process is completed.
